## Marina Vision

Marina Vision combines softwares and cameras to optimise marina occupation, speed detection and traffic analysis.

## Technology

Marina Vision is based on A.I. and machine learning. It uses picture analysis to detect events on the water map.

- **Traffic analysis**

Counting boat traffic at the marina entrance.

- **Speed detection**

Detect boat speed at the marina entrance channel or others port areas. This system identifies and prevents from speeding thanks to an educational panel. It displays velocity when a boat is getting inside or outside the marina to warn potential speeding issues

- **Real-time berth supervision**

Identify boat presence or absence on each berth.

## Benefits

Boaters sensitization

Optimise safety level

Traffic and flows statistics

## SafeMarina

SafeMarina optimises marina staff response time on security issues. This system detects critical events identified by marina manager.

## Technology

SafeMarina is composed of synchronized cameras using A.I. This device detects incidents to prevent alerts on monitoring software.

## Benefits

Optimise safety level

Reduce incidents

Operational time saving
