## Shellspot

Presence sensor helps marinas to increase incomes capacity. Fix on docks, it detect the presence or absence of a boat on each berth to get the real-time occupation of the marina.

## Technology

Shellspot is composed of different technologies using forecast electronic & IoT. Thanks to LoRa technology sensors use encrypted network, with a long range and low-consumption signal. Autonomy : 5-years battery.

## Operational time-saving

Shellspot release marina staff by automated several times a day the manual inventory. Employees could be assigned to strong value-added tasks.

## Interactive marina map

Nauticspot technology brings the real-time supervision aspect and is compatible with existing marina softwares :

## Benefits

Traffic and occupation statistics

Distancing real-time supervision

Resistant to marina environment (sea, salt, wind)

New incomes opportunity
